## DETAILED ACTION

### *Response to Arguments*

Applicant's arguments, see pages 6-9, filed 11/8/2007, with respect to the rejection(s) of claim(s) 1, 3-4, 7, 9-10, 13 and 15-15 under 35 USC § 102(e) as anticipated by US Patent 6724554 to Braithwaite have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of US Patent 6968459 to Morgan et al.(hereinafter Morgan).

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 3-4, 7, 9-10, 13, 15-16 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent 6968459 to Morgan.
3. Regarding Claim 1, 7, 13, Morgan discloses the at least one storage area in storage circuit, in which storage area protected data relating to circuitry security are located see Col 1 Ln 55-62; mode setting means arranged to set processor in at least two different operating modes, the mode setting means being capable of altering the processor operating mode see Col 7 Ln 8-16; storage circuit access control means arranged to enable said processor to access the

storage area in which said protected data are located when first processor operating mode is set see Fig. 2 item 214; storage circuit access control means arranged to prevent said processor from accessing said storage area in which protected data are located when a second processor operating mode is set, thereby enabling said at least one processor to execute non-verified software downloaded into the circuitry see Fig. 2 item 216 & Abstract.

4. Regarding Claim 3, 9, 15, Morgan discloses the authentication via passwords see Col 5 Ln 39-46.
5. Regarding Claim 4, 10, 16, Morgan discloses the means to indicate which mode the processor is operating see Col 6 Ln 23-35.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - a. A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
7. Claim 2, 6, 8, 12, 14, 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6968459 to Morgan in view of US Patent 2001/0055980 A1 to Sato.
8. Regarding Claim 2, 8, 14, Morgan does not disclose the timer arranged to control a time period during which processor is in second mode. However, Sato discloses the timer being used to control period of usage see Par. 0014. It would be obvious to one having ordinary

skill in the art at the time of the invention to include the timer being used to control period of usage in the invention of Morgan in order to division of usage on CPU and memory as taught in Par. 0015.

9. Regarding Claim 6, 12, 18, Morgan does not disclose the circuitry being in a mobile telecommunication terminal. However, Sato discloses the circuitry being in a mobile telecommunication terminal see Fig. 2 item 23.
10. Claim 5, 11, 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6968459 to Morgan in view of US Patent 2002/0040442 A1 to Ishidera.
11. Regarding Claim 5, 11, 17, Morgan does not disclose the mode setting means comprise an application program. However, Ishider discloses the mode setting means comprises an application program see Fig. 1 item 40. It would be obvious to one having ordinary skill in the art at the time of the invention to include mode setting means comprises an application program in the invention of Morgan in order to have an user access the mode setting feature. as taught in Inshidera see Par. 0063.
